

The background is a dark, textured surface with several red, 3D location pins. One pin is prominently in the center, with others to its left and right. Numerous clear, realistic water droplets of various sizes are scattered across the scene, some on the surface and others appearing to float in the air. The lighting is soft, creating subtle highlights on the pins and droplets.

State-of-the-Art Text to Video for all.

The image features a light gray background with a subtle gradient. In the top-left and bottom-right corners, there are clusters of realistic water droplets of various sizes, some overlapping. The droplets have highlights and shadows, giving them a three-dimensional appearance. In the center of the image, the text "GEN.AI IMAGE" is written in a large, bold, black sans-serif font. To the right of this text, the words "(MAIN PRODUCT)" are written in a smaller, all-caps, black sans-serif font.

A 3D rendered scene featuring a winding road with a dashed white line. Three red location pins are placed along the road: one in the distance, one in the center, and one on the right side. The background is a light blue sky with soft clouds. Several water droplets of various sizes are scattered across the scene, some on the road and some in the air. The overall aesthetic is clean and modern.

SD WEBUI (Automatic1111)

SD WEBUI (Automatic1111)

SD WebUI uses Gradio for its user interface. Each parameter in the Stable Diffusion program is exposed via a UI interface within SD WebUI. SD WebUI contains additional parameters not included in Stable Diffusion itself, such as support for Low-rank adaptations, ControlNet and custom variational autoencoders. SD WebUI supports prompt weighting, image-to-image based generation, inpainting, outpainting and image scaling. It supports over 20 samplers including DDIM, Euler, Euler α , DPM++ 2M Karras, and UniPC. It is also used for its various optimizations over the base Stable Diffusion.

```

ComfyUI

ComfyUI was released on GitHub in January 2023. According to comfyanonymous (the creators), a major goal of the project was to improve on existing software designs in terms of the user interface. The creators had been involved with Stability AI but by 3 June 2024 that involvement had ended and an organization called Comfy Org had been created along with the core developers.

Run 1

Stability AI has previously leaned hard on its open-source approach to create interest in its products. Various versions of Stable Diffusion have been freely available to download and tinker with since the model was publicly released back in August 2022, and last month, the company released a suite of open-source large language models (LLMs) collectively called StableLM. Stability AI's founder and CEO, Emad Mostaque, has been outspoken about the importance of making AI tools open source in order to increase public trust, claiming that "open models will be essential for private data," *dated 2023 - Wikipedia*

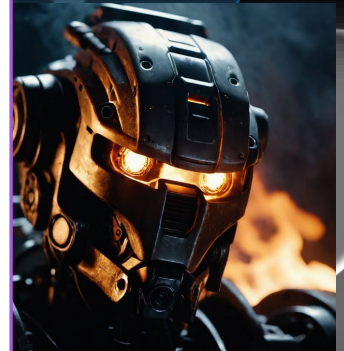

SD WEBUI FORGE

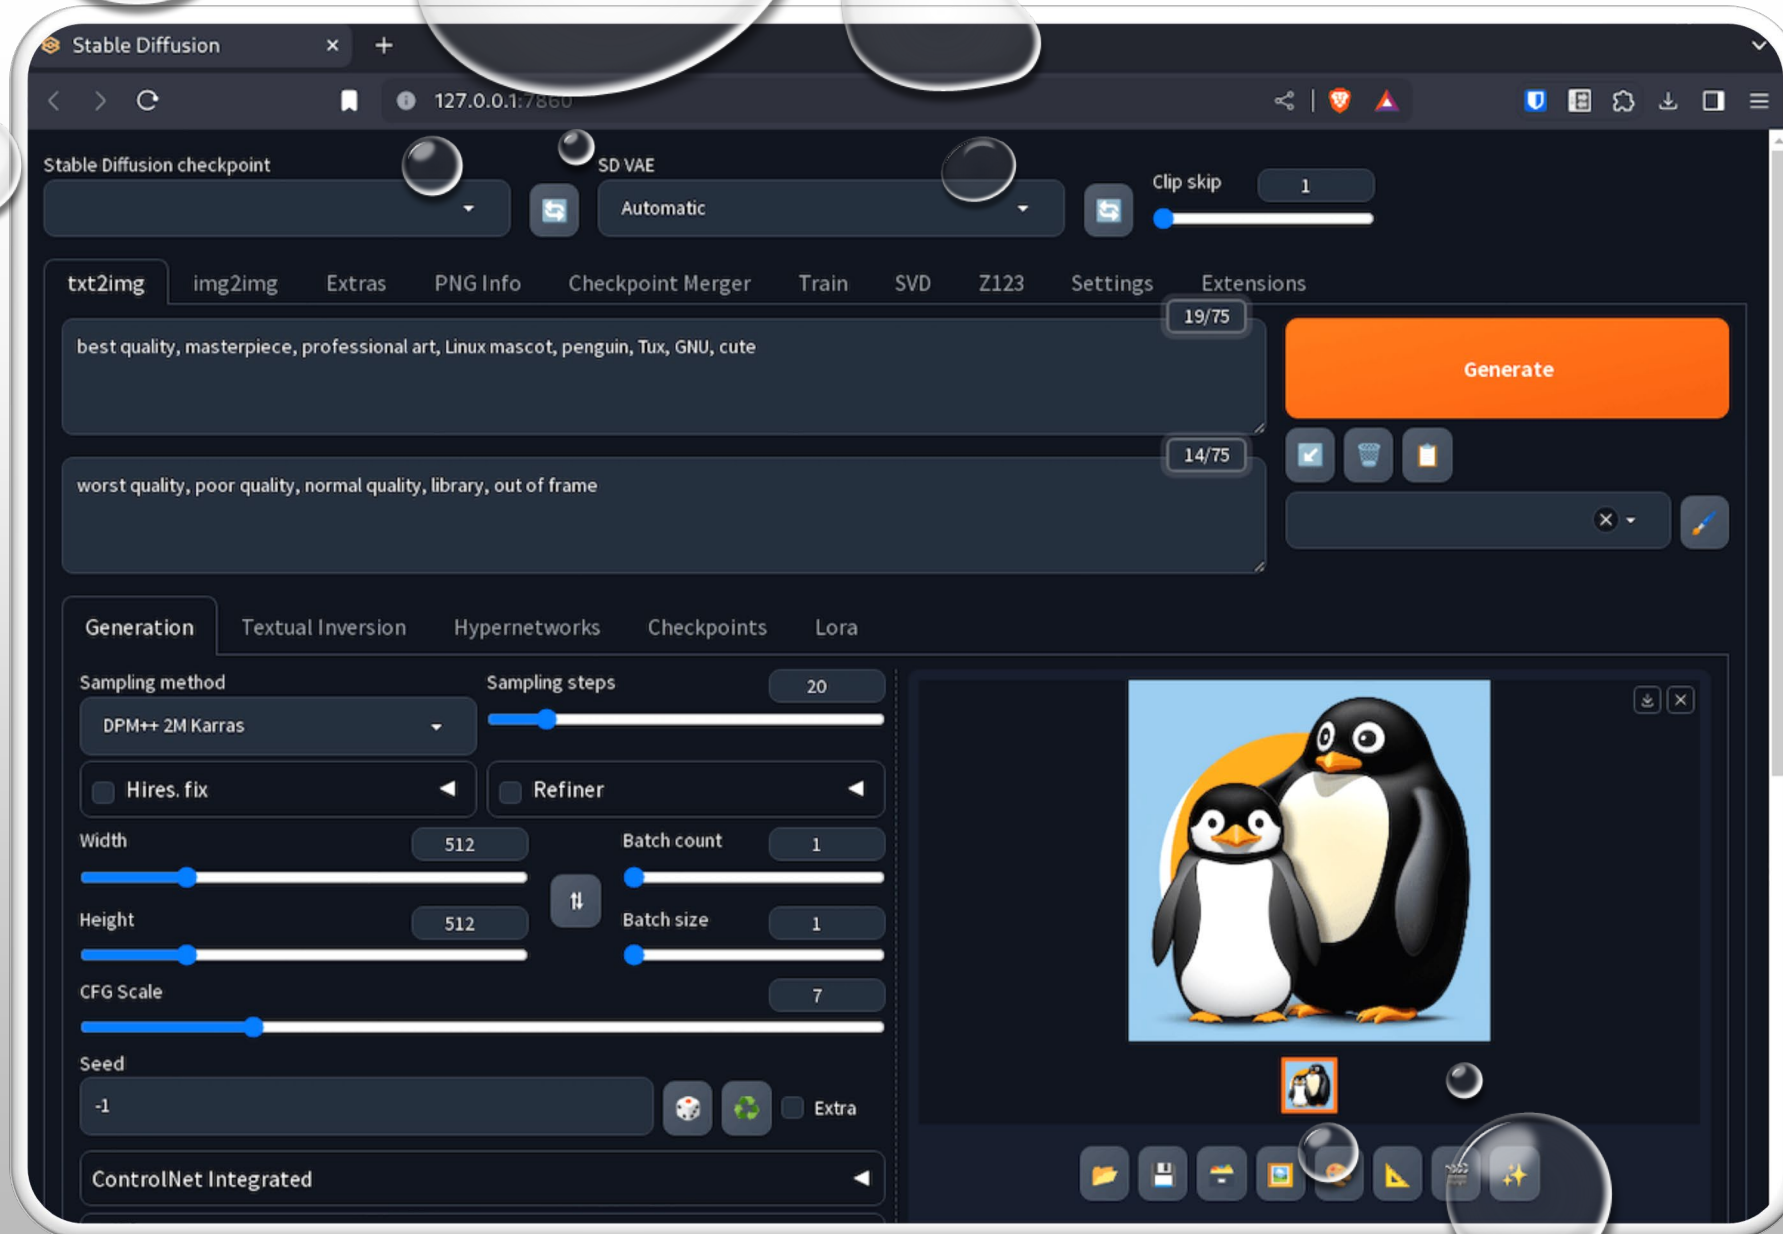

FORGE
NEW UI

 **SDFORGE**

SD WEBUI FORGE

Stable Diffusion WebUI Forge (Forge) is a notable fork of SD WebUI started by Lvmin Zhang, who is also the creator of ControlNet and Fooocus. The initial goal of Forge was to improve the performance and features of SD WebUI with the intention to upstream changes back to SD WebUI. One of Forge's optimizations allowed users with low VRAM to generate images faster on some versions of Stable Diffusion. It improved generation speed for users with 8GB and 6GB VRAM by 30-45% and 60-75%, respectively. Forge also includes extra features such as support for more samplers than standard SD WebUI. Some of Forge's optimizations were borrowed from ComfyUI, and others were developed by the Forge team. In August 2024, Forge added support for the Flux diffusion model developed by Black Forest Labs, which is not yet supported by SD WebUI.

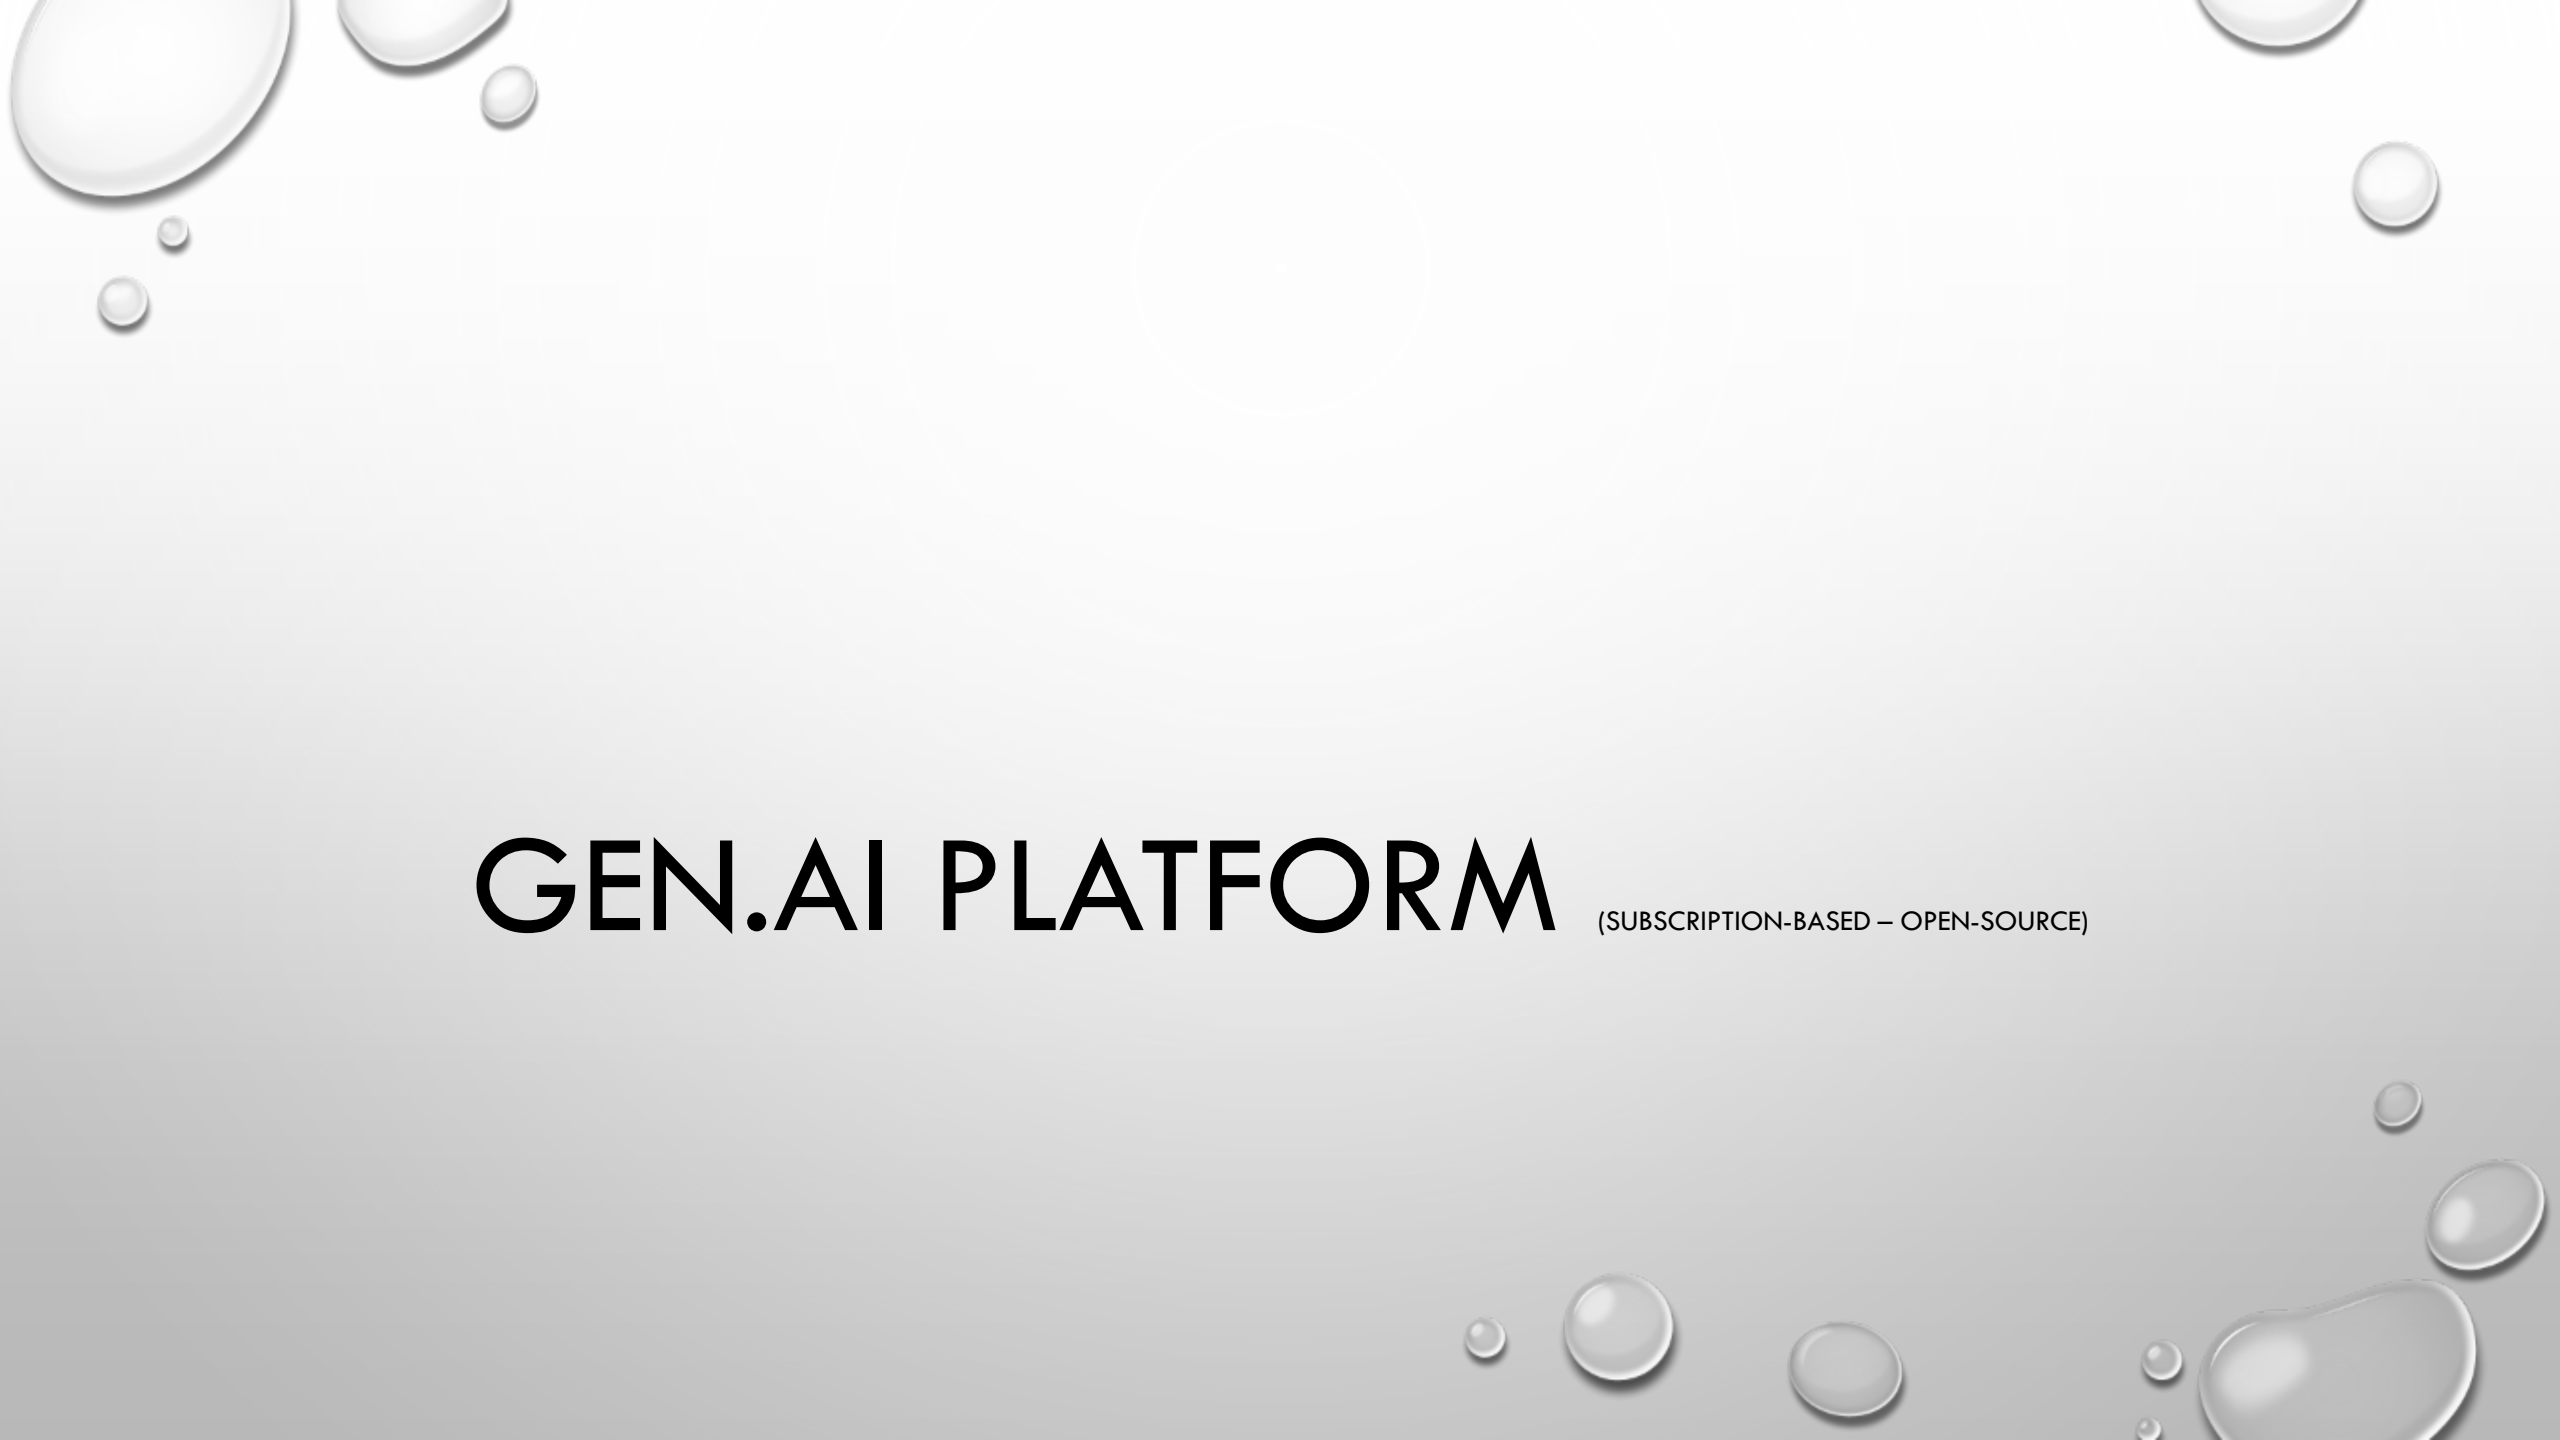

Similar Look & Feel to SD WebUI, Biggest Improvements :

- generation speed for users with 8GB and 6GB VRAM by 30-45% and 60-75%, respectively.
- ControlNet is Integrated into Forge.
- Forge added support for the Flux diffusion model.

A 3D rendered scene featuring a grey road with a white dashed line curving through the center. Three red 3D map pins are placed on the road: one in the distance on the left, one in the middle ground in the center, and one in the foreground on the right. The background is a soft, light blue gradient. Numerous realistic water droplets of various sizes are scattered across the scene, particularly in the upper left and lower right corners, adding a fresh, clean aesthetic.

GEN.AI IMAGE PLATFORMS (SUBSCRIPTION-BASED)

The background features a light gray gradient with several realistic water droplets of varying sizes in the corners. The top-left and bottom-right corners have clusters of droplets, while the top-right and bottom-left corners have fewer, more isolated droplets.

GPU Pricing

Deploy your own app on our competitively priced GPU fleet.

Competitive pricing for custom deployments. Get H100s from as low as **\$1.89/hr**. Contact sales@fal.ai to get started.

GPU		VRAM	PRICE PER HOUR*	PRICE PER SECOND*
	H100	80GB	\$1.89/h	\$0.0005/s
	H200	141GB	\$2.10/h	\$0.0006/s
	A100	40GB	\$0.99/h	\$0.0003/s
	B200	184GB	contact us	contact us

*starting at

Output-Based Pricing

Models deployed by us are priced by the output they generate, like videos, images or tokens

Note: Some models not shown here may use GPU-based pricing even if they generate media.

Video Models

Video models are billed by output unit — per second or per video — depending on the model. The values shown represent output-based pricing.

MODEL	UNIT	PRICE	OUTPUT PER \$1
Hunyuan Video	video	\$0.4	3 videos
Kling 1.6 Pro Video	video second	\$0.095	11 video seconds
Kling 2 Master Video	video second	\$0.28	4 video seconds
Alibaba Wan Video	video	\$0.4	3 videos
MiniMax Video Live	video	\$0.5	2 videos

* For a fair comparison, we've normalized these values to show approximate output per \$1.

* Based on an estimated average video = 5 seconds at 720p. Actual output may vary based on model, resolution, and prompt complexity.

Image Models

Image models are billed by either image count or output size in megapixels (MP). All pricing here is normalized to 1MP to allow simple comparison.

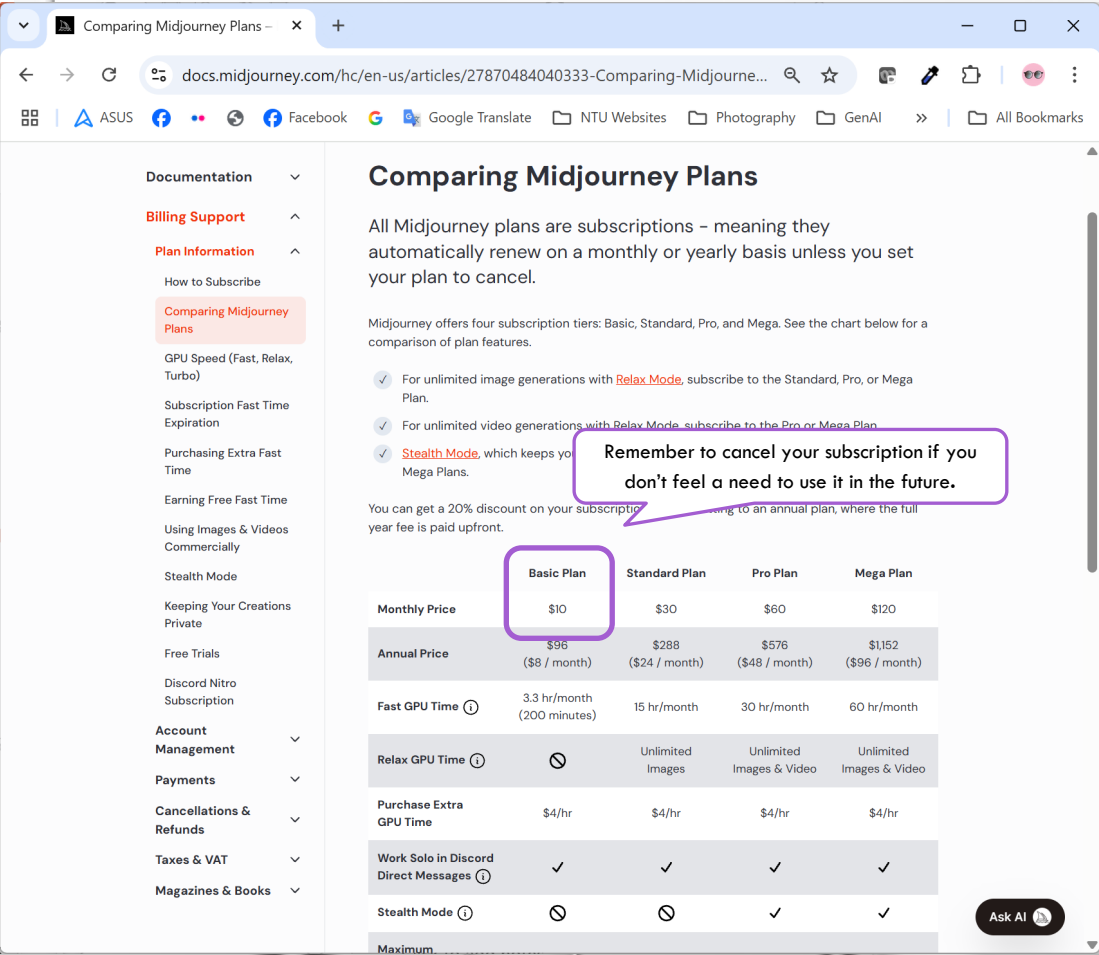

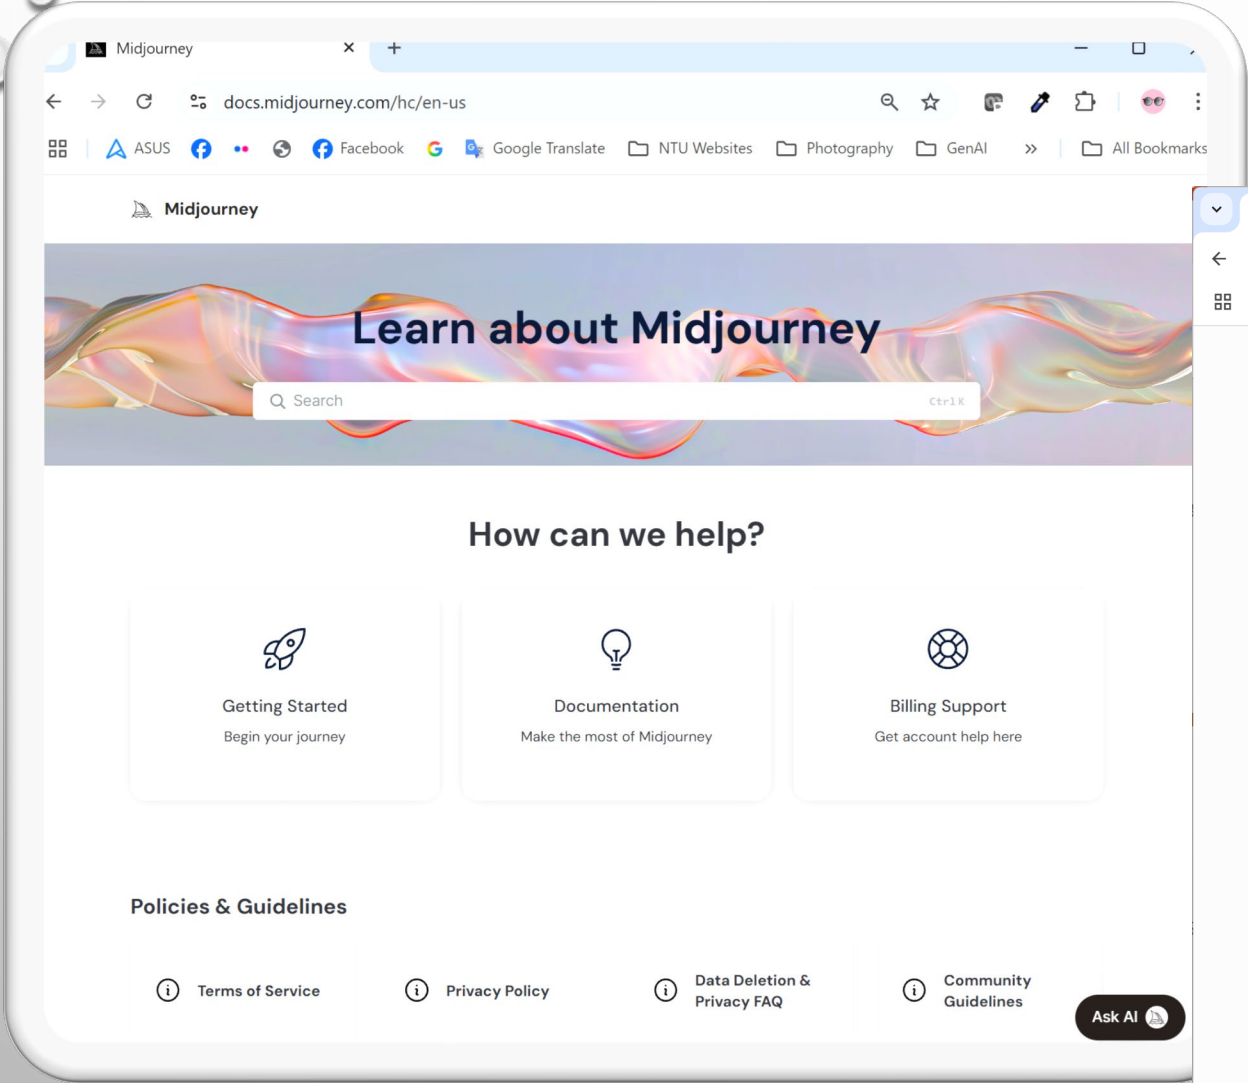

MODEL	UNIT	PRICE	OUTPUT PER \$1
FLUX.1 [dev]	megapixel	\$0.025	40 megapixels
FLUX.1 [schnell]	megapixel	\$0.003	333 megapixels
FLUX.1 [pro]	megapixel	\$0.05	20 megapixels
Stable Diffusion 3 - Medium	image	\$0.035	29 images

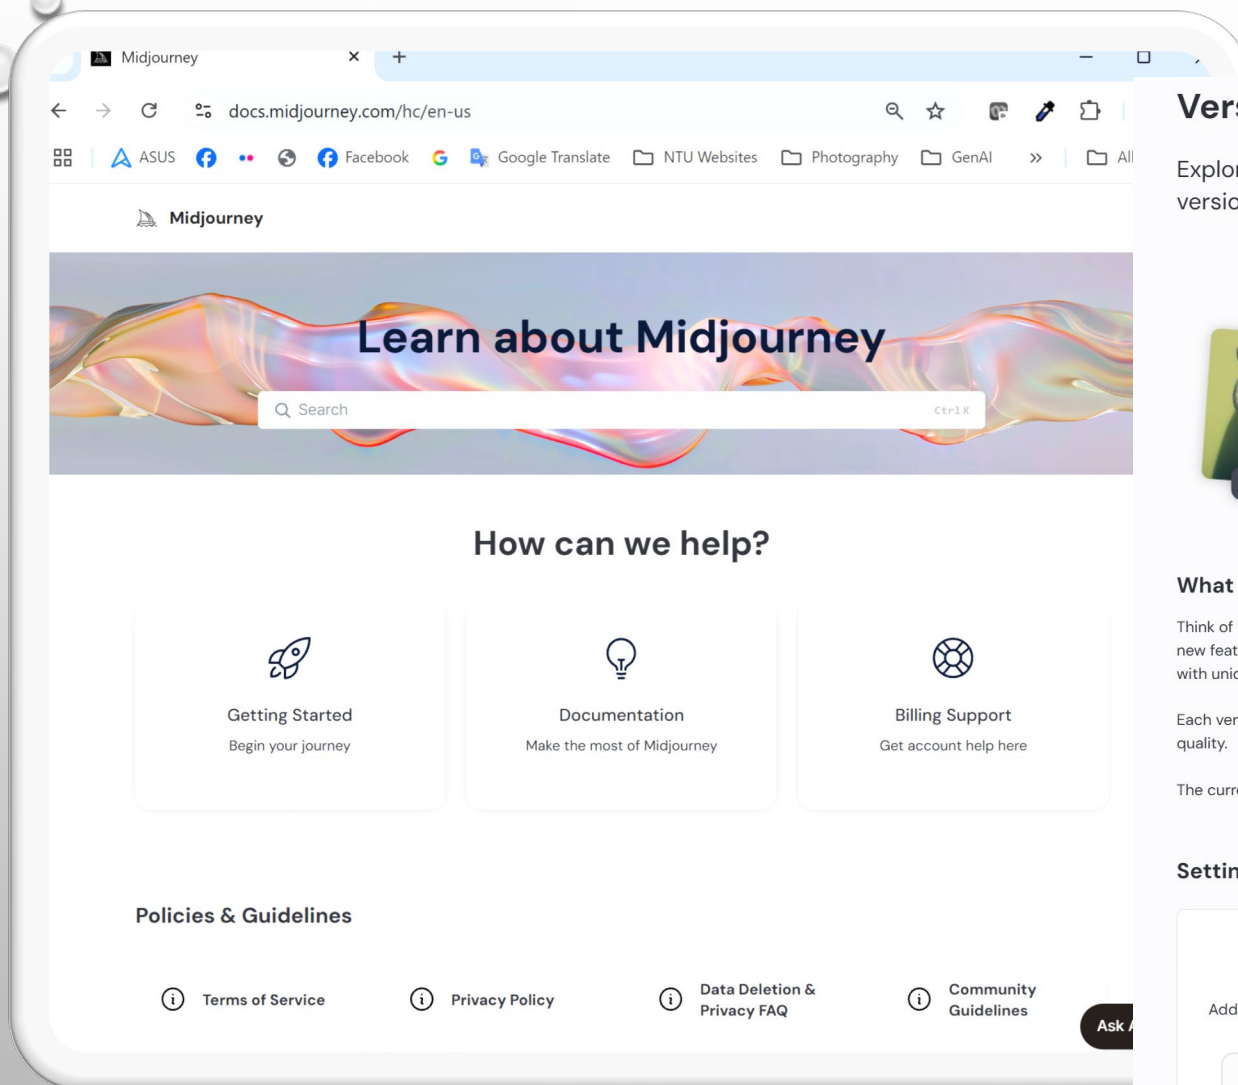

Output is based on 1MP images. Higher resolutions will be priced proportionally. All models listed here follow output-based pricing. Some other models may use GPU-based pricing depending on architecture.

GEN.AI PLATFORM

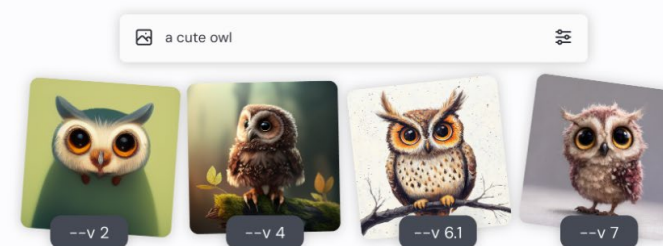

(SUBSCRIPTION-BASED - COMMERCIAL MODEL)

Version

Explore and switch between Midjourney's versions using the version parameter: `--version` or `--v`

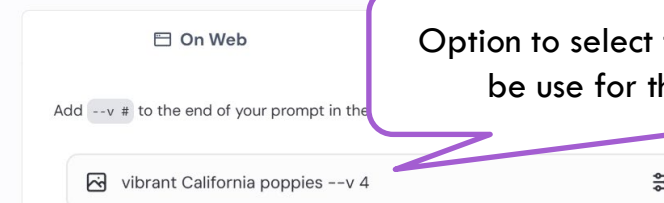

What are Versions?

Think of versions like software updates. When software is updated, it might have better graphics or new features. Similarly, Midjourney versions refer to the different models released over time—each with unique features.

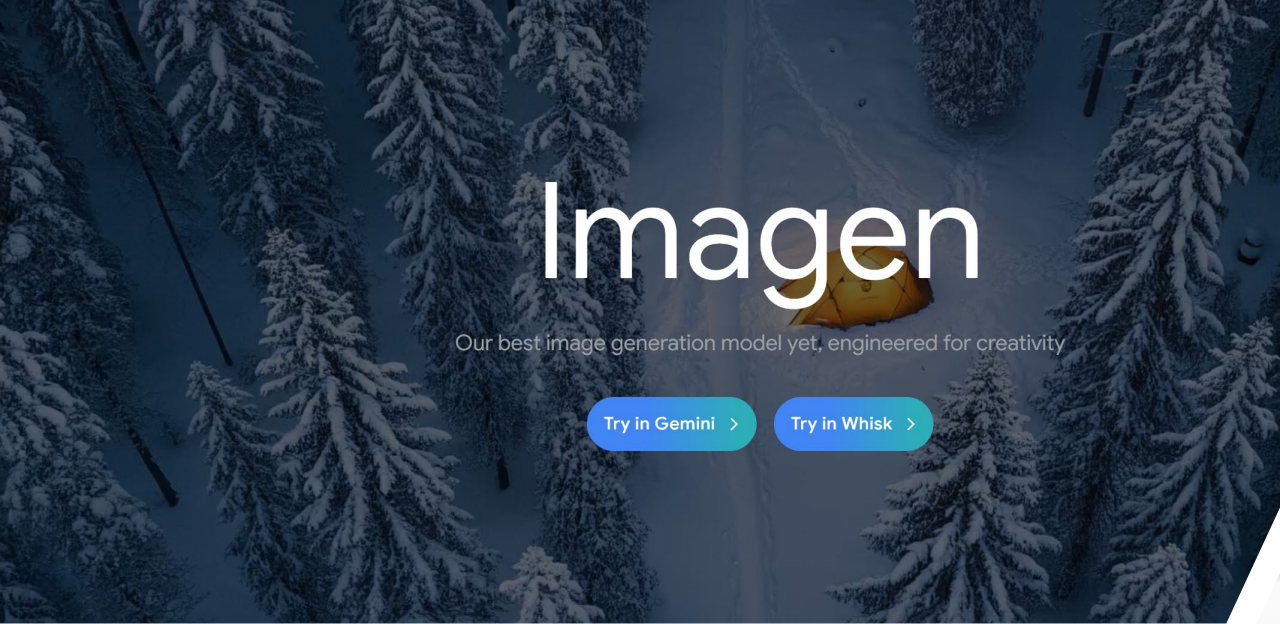

Each version might handle prompts differently, have unique artistic styles, or offer improved image quality.

The current default Midjourney version is 7.

Setting a Version

Option to select the MidJourney Version to be use for the Generated Image.

Artificial intelligence
is a tool, not a threat.

Rodney Brooks
