The background is a dark, gradient grey. It is decorated with numerous realistic water droplets of various sizes. Some droplets are large and prominent, while others are small and scattered. They are primarily located in the top-left and bottom-right corners, with a few smaller ones in the center and top-right areas. The droplets have highlights and shadows, giving them a three-dimensional appearance.

Today, we're releasing an open version of Krea 1, our first image model trained in collaboration with [Black Forest Labs](#) to offer superior aesthetic control and image quality. This checkpoint is a guidance distilled model fully compatible with [FLUX.1-dev](#) allowing seamless integration with the existing ecosystem. FLUX.1-Krea [dev] has been distilled to match the quality of Krea 1 with a focus on preserving aesthetics and photorealism.

Unlike most image models, FLUX.1 Krea has been created with opinionated aesthetics in mind. We focused on creating a model that truly fits our specific aesthetic preferences. In this technical report, we'll share the process and learnings from developing this model, including insights on pre-training and post-training, as well as future research directions.

"White owl, close up portrait, mysterious ghost like owl, low contrast, cinematic dark moody photo, slight blue color grading"

As Artificial General Intelligence (AGI) progresses toward human-level cognition, a profound question arises: *Can machines ever become conscious or self-aware?*

A man asked ChatGPT how to remove sodium chloride from his diet. It landed him in the hospital

The man had been swapping sodium chloride, or table salt, for sodium bromide for three months after consulting ChatGPT

Rachel Dobkin in New York • Thursday 07 August 2025 22:59 BST • [12 Comments](#)

A 60-year-old man landed in the hospital after asking [ChatGPT](#) how to remove sodium chloride from his diet.

As humans interact more with [artificial intelligence](#), there continues to be stories of how a conversation with a chatbot could be dangerous, [sometimes even deadly](#).

While [part of the focus has been on mental health](#) and concerns that chatbots are not equipped to handle these types of struggles, there are also implications for people's physical health.

People often hear that you shouldn't [Google](#) your symptoms, as medical advice should be given by a health professional, who knows your medical history and can actually examine you.

According to a new case report published in the [American College of Physicians Journals](#) on Tuesday, you should also be careful when considering asking a chatbot health questions.

The report looked at a man who developed bromism after asking ChatGPT for advice on his diet.

Bromism, or Bromide toxicity, was well-known in the early 1990s but is less common now. At the time, bromide salts were found in many over-the-counter medications to treat insomnia, hysteria and anxiety. Ingesting too much bromide can cause neuropsychiatric and dermatologic symptoms.

Open AI, the developer of ChatGPT, admits in its Terms of Use the chatbot's output "may not always be accurate."

"You should not rely on Output from our Services as a sole source of truth or factual information, or as a substitute for professional advice," the Terms of Use say.

The company's Service Terms also explicitly state: "Our Services are not intended for use in the diagnosis or treatment of any health condition."
